

VEHICLE FLEET

Currently we own 28 trucks and trailers (VOLVO, DAF trucks and Schwarzmüller trailers) and one BDF trailer (Mercedes) with removable extensions (120 m³ /23 t). Most of our vehicles are double-deck tilt trailers, which are ideal for transportation of light and fragile goods (it is possible to load 66 EWP or 52 nautical palettes, to a total load weight of 24,5 t). This means that we can carry more goods and that the transport is cheaper and more ecological. This kind of transport is suitable for long journeys across the Europe, where many fees are paid: toll, tunnels, ferries etc. All trailers meet the requirements of the standard for securing cargo DIN EN 12642 Code XL.

Every load is insured up to CZK 7.000.000,- according to CMR Convention. It is also insured against theft (see the insurance policy).

Double Decker

The second floor is ideal for the transport of non-stackable goods and it can be positioned at a height from 50 cm to 180 cm. The position of the floor can be different in single parts of the trailer according to the wishes of the customer. In general it is possible to load 66 EWP (120x80 cm) or 52 nautical palettes (120x100 cm), with a total weight of 24,5 t. Multifunctionality of these trailers is also possible by removing the floor, the trailer can then be used as a common Mega tilt trailer with a load height of 3 m.

load area: 13,65 x 2,48 x 3 m (100 m³)

height for loading from the side: 2,85 – 3 m (mechanical lifting of the roof)

number of palettes (EWP): 66 pcs on two floors (33 pcs / 12,5 t on single floor) or 34 pcs / 25 t when the trailer is used with only one floor

JOLODA

For transportation of paper rolls we use Joloda trailers as the Joloda system has many more possibilities for its usage.

loading area: 13,65 x 2,48 x 2,73 m (92 m³)

height for loading from the side: 2,66 m

number of palettes (EWP): 34 pcs / 25 t

equipment: 16 pcs of securing steel wedge, 2 pcs of rollers with total lifting capacity 3,5 t, straps with high strength, antislip pads, safety edges

VOLVO / DAF + Schwarzmüller (MEGA 100 m³)

loading area: 13,65 x 2,48 x 2,95-3,02 m (100 m³)

height for loading from the side: 2,85 – 3,02 m (mechanical lifting of the roof)

number of palettes (EWP): 34 pcs / 25t
